Exercise 1.5.2

Task 1

The number of confirmed COVID-19 cases in selected countries is shown in the table below:

Burundi	694
Ethiopia	113295
Ghana	52198
Kenya	88380
Nigeria	68937
Rwanda	6129
Somalia	4525
South Sudan	3166
Sudan	19196
Uganda	22499

In this task, we are going to practice using and manipulating dictionaries.

1. Create a dictionary for the given data and name it `COVID_19`
2. How many keys are in the data? assign your answer to a variable called `num_keys`.
3. Remove Nigeria from the data
4. Add Tanzania with the value 509

Question 1: Create a dictionary for the given data and name it `COVID_19`

```
### CG T1_1
### Write your code below:

COVID_19 = {
    "Burundi": 694,
    "Ethiopia": 113295,
    "Ghana": 52198,
    "Kenya": 88380,
    "Nigeria": 68937,
    "Rwanda": 6129,
    "Somalia": 4525,
```

```
    "South Sudan": 3166,
    "Sudan": 19196,
    "Uganda": 22499
}
```

Question 2: How many keys are in the data? assign your answer to a variable called `num_keys`.

```
### CG T1_2
### Write your code below:

num_keys = 10
```

Question 3: Remove Nigeria from the dataset

```
### CG T1_3
### Write your code below:

del COVID_19['Nigeria']
```

Question 4: Add Tanzania to the dataset. Tanzania recorded 509 cases of COVID-19.

```
### CG T1_4
### Write your code below:

COVID_19['Tanzania'] = 509
```

Task 2

Consider the dictionary:

```
### CG T2_init
### DON'T DELETE THIS CODE!

food = {
    "fruits": ["apples", "oranges", "pears", "mangoes"],
    "vegetables": ["tomatoes", "lettuce", "spinach", "green peppers"],
    "meat": ["chicken", "fish", "beef", "ostrich"],
    "dairy": ["yogurt", "milk", "cheese", "ice-cream"]
}
```

Question 1: How many keys does the dictionary `food` have?

```
### CG T2_1
### Write your code below:

# The dictionary food has four (4) keys
food_keys = 4
print(len(food))
```

```
4
```

Question 2: List the values in `food`

```
### CG T2_2
### Write your code below:

# The values in dictionary food are
print(food.values())
```

```
dict_values([['apples', 'oranges', 'pears', 'mangoes'], ['tomatoes', 'lettuce',
```

Question 3: How do you access `"spinach"` from `food`?

```
### CG T2_3
### Write your code below:

print(food['vegetables'][2])
```

```
spinach
```

Question 4: How do you add `"grapes"` to the list of fruits in `food`?

```
### CG T2_4
### Write your code below:

food['fruits'].append('grapes')
print(food['fruits'])
```

```
['apples', 'oranges', 'pears', 'mangoes', 'grapes']
```
